Health Unit reminds you to be cautious during cold weather

The Leeds Grenville and Lanark District Health Unit would like to remind everyone to take appropriate precautions during the predicted extreme wind chill today through until Friday.

Cold weather can cause very serious health conditions and even death. With a wind chill of -35°C or colder, unprotected skin can freeze in as little as 10-30 minutes, and the risk of developing hypothermia is very high. **During very cold weather, everyone is at risk, however the elderly, infants and children, people taking certain prescription medications, and people with pre-existing health conditions are in greater danger.** There is also an increased risk of hypothermia for outdoor workers and people living without adequate heat or shelter.

During these cold temperatures, the Health Unit strongly encourages the public to check on a neighbour or friend who may be isolated, disabled, or living alone and have a greater risk of suffering cold weather related injuries. The Health Unit also encourages homeless people to get in from the cold.

During cold weather everyone should take the following precautions:

- Wear layers of warm dry clothing including a hat, mitts, and a layer to block the wind
- Drink warm non-alcoholic, non-caffeinated beverages
- Cover exposed skin surfaces when outdoors
- Maintain a heated environment of around 20°C / 68°F
- Be aware of how your medications, or health conditions may increase your risk
- Be aware of the early signs of frostbite and hypothermia
- Be aware of the dangers of using an oven or space heater as a heating device.

For more information on how to protect yourself during extreme cold visit the Health Unit website at: www.healthunit.org or go to <http://www.mb.ec.gc.ca/air/wintersevere/index.en.html> or <http://emergency.cdc.gov/disasters/winter/guide.asp>. Like us on Facebook for important public health updates.

For specific cold weather questions call the Health Action Line at 1-800-660-5853 or 613-345-5685.
