

Food Establishment Inspection Information is Now Available online

The Leeds, Grenville and Lanark District Health Unit is pleased to announce improvements in how the public accesses health inspection information on local food establishments. Now the public can access the latest inspection information online for any inspected food premises in the tri-county area.

To access the reports, visit the Health Unit website at www.healthunit.org and select the food safety page. Click the INSIGHT button and type in the name of the establishment you would like to review. **Only premises that are inspected by public health inspectors will be listed in the inventory.** An explanation of how to interpret inspection information is also available on this website.

The public are encouraged to view inspection information over a period of time to get a better idea of ongoing compliance rather than reviewing only a single report. The site only includes inspection reports from 2016 but new reports will be posted on an ongoing basis. Any reports from inspections completed before 2016 can still be obtained by using the previous process which is available on the website. The INSIGHT database provides information only and is not an endorsement of any business.

For more information on INSIGHT, please email us at webmaster@healthunit.org or call 1-800-660-5853.
