

# Leeds, Grenville and Lanark District Health Unit

Media Release  
July 6, 2017

## Food Establishment Inspection Information is available online

The Leeds, Grenville and Lanark District Health Unit inspects local food premises under the Food Premises Regulation. Food premises such as restaurants, grocery stores, food trucks and hot dog carts are inspected for your protection. Inspection summaries and reports were always available by request but now you can go online through INSIGHT to access health inspection information on local food establishments in the tri-county area.

The public are encouraged to view summary inspection information over a period of time to get a better idea of ongoing compliance rather than reviewing only a single report. INSIGHT includes summary inspection reports from 2016 and 2017. New reports will be posted on an ongoing basis. Any reports from inspections completed before 2016 or full reports can still be obtained by using the previous process which is outlined on the health unit's food safety page on the website. The INSIGHT database provides information only and is not an endorsement of any business.

To access the summaries, visit the Health Unit website at [www.healthunit.org](http://www.healthunit.org) and select the food safety page. Click the INSIGHT button and type in the name of the establishment you would like to review. **Only premises that are inspected by public health inspectors will be listed in the inventory.** An explanation of how to interpret inspection information is also available on this website.
